# CONTENTS

01 Introducing

02 Baby Kabosu INU

03 Our Use

04 Charity Focus

05 Tokenomics

06 Roadmap

D

S

L

## Complete Ecosystem

The Ecosystem will entail a DEX, a wallet, an NFT Marketplace, a token bridge, a staking protocol, a pet adoption platform tied to charitable work, and finally, our own Centralized Exchange, all tied to the token Baby KABOSU.

## Multi Layered Platform

A multi-layered platform that will allow users to perform different tasks within one, seamless Ecosystem.

## NFT Marketplace

With a unique NFT collection, we will add another great feature to the ecosystem. A wide range of extraordinary characters and items will be available. You will also be able to play the characters you own within the Metaverse and wear the items and stand of the crowd by exploring the Metaverse with a rare character or by wearing rare items. Everything will be possible in Baby Kabosu world.

# BABY KABOSU INU

BABY KABOSU INU is a decentralized Metaverse Game token build on Binance Smart chain, aims to become a globalized decentralized alternative for holders in the light of an ever-expanding market.

Starting with the release of Baby Kabosu and continuing with the release of INU in the near future.

The Ecosystem will entail a DEX, a wallet, an NFT Marketplace, a token bridge, a staking protocol, a pet adoption platform tied to charitable work, and finally, our own Centralized Exchange, all tied to the token Baby KABOSU.

# Our Use

**As we progress on the ecosystem's growth...**

Each token serves as a “share” asset that allows you to conduct several operations on each platform, whilst taking off sell-pressure to the main inflationary asset (INU). The idea is to have each branch operate individually, but allow users to utilize INU to be able to move back and forth between branches.

Users will be required to pay use fees on INU, and to conduct operations with each of the branches’ specific share-type assets, either by stake-type operations or straight-up fees. An example to better illustrate this can be the NFT marketplace branch. Holders of INU are going to be able to access the platform and utilize the platform, whilst holders of the specific branch asset will be able to process bids and payments with such assets.

Another example can be the token bridge, utilizing our assets to move freely between networks and paying fees on INU. With the initial DEX/AMM release, people will be able to farm/stake their ecosystem tokens as well as other assets, exchange tokens using our very own backend and frontend and utilize INU to participate in lottery events. Becoming our first proper use case for the ecosystem.

# Charity

---

As announced with the release of Baby Kabosu, charity is a big part of the project. We maintain the NFT auctions that will donate 50% of the profits to charity, as well as an open-sourced voluntary charity wallet, focusing on animal shelters.

# Tokenomics

100 000 000 000 000 Total Supply
